GravityZone Security for Mobile Devices

A resource-efficient security solution that provides high performance, protection, and centralized management

Bitdefender GravityZone Security for Mobile Devices unifies enterprise-wide security with management and compliance control of iPhone, iPad and Android devices to support bring-your-own-device (BYOD) initiatives. It introduces a holistic mobile security approach that helps organizations maintain compliance while minimizing IT intervention and effort in the BYOD experience. Tightly integrated into GravityZone Control Center, it is not "yet another solution" that adds to administrators' workload.

From the same management platform used to control security across virtualized and physical endpoints, you can start enforcing security policies for mobile devices with no additional infrastructure. The mobile security services inherit all the benefits of the unique architecture of Bitdefender Gravity Zone. It gives administrators the tools to easily extend security policies to any number of iOS and Android devices, protecting them against unauthorized use, riskware and loss of confidential data.

Key capabilities

- Unified security helps minimize administrative overhead – administrative burden is reduced with the real-time status of device compliance and single pane of glass approach.
- Control Center helps easily identify BYOD devices and apply the security policies agreed upon by their users, enabling safe adoption of BYOD devices.
- Number-one-ranked anti-malware offers real-time and on-demand anti-malware scanning for Android devices ensuring they are free of malicious code

Bitdefender delivers a holistic security approach to protect not only mobile devices, but also physical endpoints and virtualized environments using the right tools to manage mobile device compliance. Designed to support controlled adoption of BYOD by enforcing security policies consistently across all devices, Bitdefender GravityZone Security for Mobile Devices helps ensure mobile devices and the sensitive business information they hold are protected. The administrative burden on IT is reduced by keeping the status of compliant and non-compliant devices up-to-date.

At-a-Glance

Bitdefender helps organizations maintain compliance while minimizing IT intervention and effort. GravityZone Security for Mobile Device allows you to enforce bring-your-own-device (BYOD) policies for mobile devices with no additional infrastructure. Bitdefender GravityZone's Control Center allows you to control all endpoints: physical, virtualized, and mobile from one console.

Key Benefits

- Secures and manages mobile devices and unified security protects your iOS and Android from a single point of control

- Minimizes administrative overhead and provides easy mobile security management through the web-based console you already use to manage virtualized and physical endpoints

- Simplifies management of VPN and Wi-Fi settings allows remote configuration of access point profiles simplifies the burden of managing Wi-Fi and VPN settings across the enterprise.

"It's an all-around win ...we have peace of mind we're protected while getting more time in our day to support the business."

Matt Ulrich, Network Administrator

Bitdefender®
BUILT FOR RESILIENCE

Simple but effective antitheft measures, like screen lock and authentication, making it simple to apply consistent security policies on all user devices and prevent unwanted access to unattended phones or tablets. You can find lost devices via a map, prevent use of lost devices by remote locking, and prevent data leakage by wiping data remotely.
