FortiCASB™

Visibility, Insight, and Control for SaaS Applications

FortiCASB is a Fortinet-developed cloud-native Cloud Access Security Broker (CASB) subscription service that is designed to provide visibility, compliance, data security, and threat protection for cloud-based services employed by an organization. With support for major SaaS service providers, FortiCASB provides insights into users, behaviors, and data stored in the cloud with comprehensive reporting tools, and provides advanced controls to extend security policies from within the perimeter to SaaS applications.

Enforcement for SaaS

API-based access to cloud applications enables visibility and control of stored data.

Total Scalability

Cloud-based subscription model grows with your organization.

On-network or Remote

Data is protected directly with the SaaS provider, not funneled to an inspection point.

Highlights

- On-Demand scanning of data stored in the cloud
- Cloud usage analytics
- User entitlement management
- Configuration assessment
- Predefined policies
- Data loss prevention and threat detection
- User behavior and activity monitoring

HIGHLIGHTS

Using an API-based approach, FortiCASB is directly connected to SaaS providers to access usage and data stored in the cloud. This method gives IT security managers the ability to scan stored data for threats, proprietary information, or sensitive customer records. This approach also ensures that all users of the organization's SaaS applications are monitored and protected by FortiCASB no matter where they are or what device they are using.

Built from the "Fabric-up", FortiCASB is designed for deep integration into the Fortinet Security Fabric to provide consolidated SaaS application management and reporting with FortiGate and FortiAnalyzer.
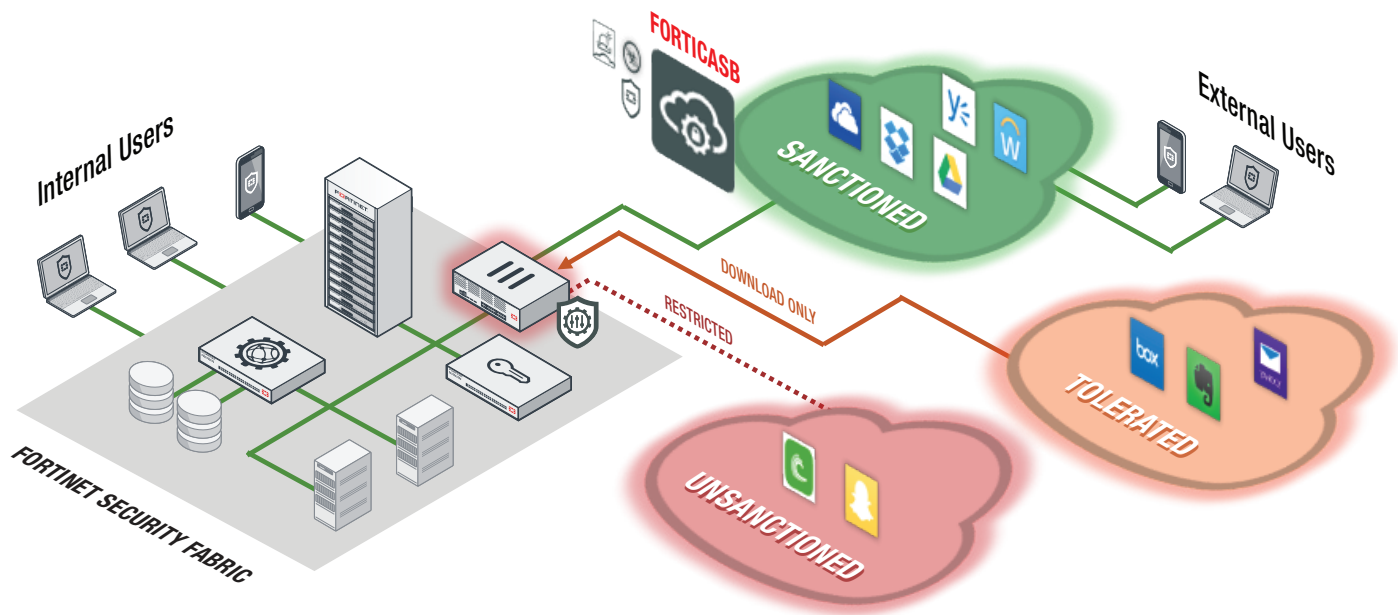

FEATURES

On-Demand Data Scanning

Unlike a proxy-based service or hardware device, FortiCASB directly connects to the SaaS provider to access data and files stored in an organization's accounts. New information is validated against data leakage policies and scanned for threats. Existing information or "data at rest" is also scanned to ensure it meets business policies. If a business policy is updated, it can be easily applied to data stored in the cloud by the administrator.

User Insights and Policies

FortiCASB offers many tools to provide insights into user behaviors and their activities on SaaS applications. Administrators can monitor usage as needed and have the ability to view user entitlements, dormant users, and conduct detailed configuration assessments.

FEATURES

Advanced SaaS Analytics

FortiCASB offers a comprehensive set of analysis tools to manage SaaS usage and data storage. Detailed user monitoring helps to quickly identify risks and automated tools help to manage incidents as they occur.

Application Discovery and Control

When used with the Cloud Access Security Inspection (CASI) features of FortiOS and with FortiAnalyzer for reporting, FortiCASB can offer a complete solution to identify SaaS applications used on the network and provide additional management tools. CASI on FortiOS provides an easy-to-use feature set to manage tolerated and unsanctioned SaaS on the network.
