Highlights

- Credential Security
- Scheduled Credential Management
- Remote Session Monitoring
- Certificate Storage
- ZTNA Integration
- Privileged Monitoring
- Automated Service Account Management
- Clientless option for Secure Remote Access
- Secure Access with MFA and SSO
- High Availability Support
- Comprehensive Reporting
- Fortinet Ecosystem Integrations

Privileged Access and Secure Remote Access

Privileged Access is defined as access to an account with privileges beyond those of regular accounts, typically in keeping with roles such as IT Managers and System Administrators. Examples of privileged access include Firewall and Network Administrators, Windows Domain and Enterprise administrators.

Importantly Privileged Account attacks remain a high-profile attack vector, and in many instances, detection alone is measured in hundreds of days, with recovery taking significantly longer.

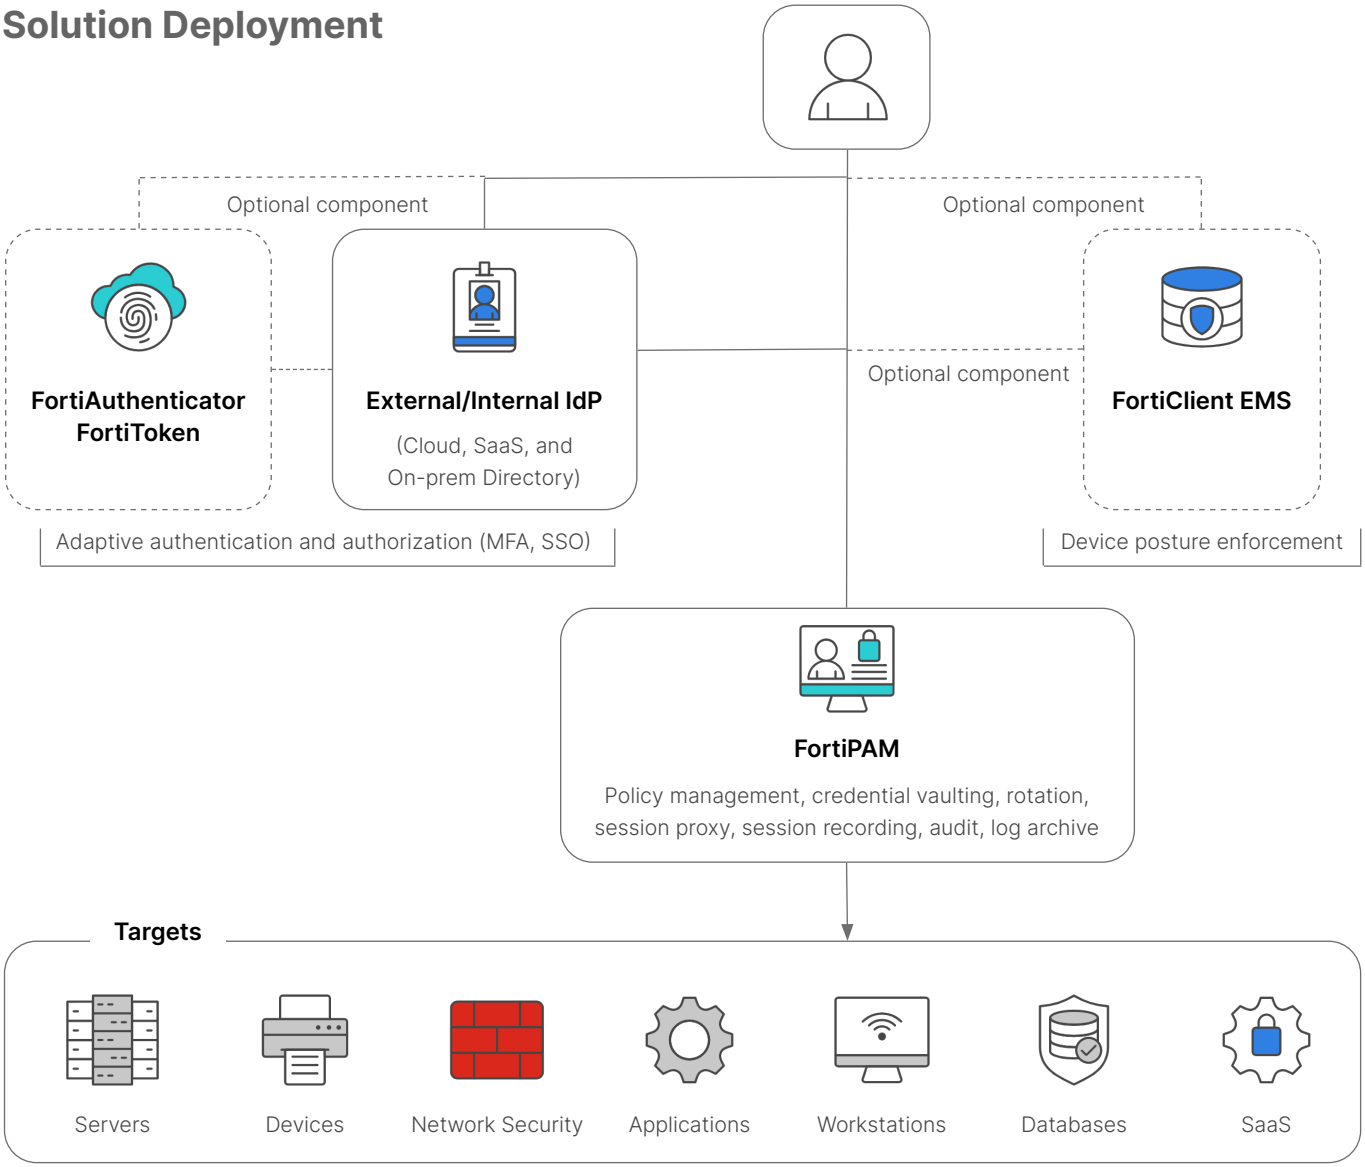
Built on the firm foundations of FortiOS, FortiPAM provides robust privileged account management, session monitoring and management, and seamless Secure Remote Access to targets, all gated by strict role-based access control, securing your most sensitive assets.

FortiPAM also supports operational technology (OT) use cases and connectivity standards, offering a variety of connectivity options, ranging from full ZTNA enforcement to Agentless connectivity with no client-side installation requisites.

With capabilities such as account discovery, secure password and certificate storage, password rotation, session monitoring and recording, and reporting, FortiPAM provides security teams with full visibility and control of privileged credential usage.

FortiPAM is incredibly straightforward to deploy and maintain. While FortiPAM is fully capable of running in stand-alone mode, it also offers deep integrations with several Fortinet products.

Solution Deployment



Highlight Details

- **Credential Security**: AES256 encryption for saved secrets; obfuscated credentials prevent leaks during sessions.
- **Scheduled Credential Management**: Supports scheduled credential changing for LDAPS, Samba, SSH, and SSH keys.
- **Remote Session Monitoring**: Provides session monitoring and video recording.
- **Certificate Storage**: Secure storage for certificates and keys with comprehensive logging for future deployment.
- **ZTNA Integration**: Continuous endpoint validation with FortiClient EMS, ensuring only trusted users and devices gain access.
- **Privileged Monitoring**: Records login, keystrokes, and actions with session termination and video playback.
- **Automated Service Account Management**: Automatic discovery, import, and rotation of Service Account credentials with policy-driven management.
- **Clientless option for Secure Remote Access**: A fully clientless solution for operational technology.
- **Secure Access with MFA and SSO**: Supports SAML, RADIUS, LDAP, and Active Directory integration for seamless and secure authentication workflows.
- **High-Availability Support**: Offers high-availability options to ensure continuous operations.
- **Comprehensive Reporting**: Centralized, tamper-resistant audit trails for compliance and enhanced visibility.
- **Fortinet Ecosystem Integrations**: Seamlessly integrates with FortiClient EMS, FortiToken, FortiAuthenticator, and FortiSandbox for enhanced security workflows.

FortiPAM Privileged Access and Session Management—Key Features

- **Scalable, market-proven, enterprise-ready solution**. Flexible solution with high availability and redundancy, as well as 'break-glass' to help ensure business continuity. Distributed network gateway support enables secret and session management across multiple networks and geographies, and the native REST API enables integration with third-party tools (e.g., Ansible, Terraform) for secret retrieval.
- **Comprehensive session controls**. With built in SSH command and Windows Application filtering in place, FortiPAM administrators can block harmful, or unwanted actions on their connected assets.
- **Fully secure credentials**. When a secret is saved in FortiPAM, that data is encrypted using advance AES256 encryption. When a FortiPAM session is launched to an asset, the credentials are completely obfuscated from the user. With this approach, regardless of what assets are being connected, credentials can never be captured or leaked by the user.
- **Zero Trust Network Access (ZTNA)**. When integrated with FortiClient EMS, FortiPAM performs continuous ZTNA endpoint validation, ensuring connecting user devices are policy compliant before granting access to sensitive systems or data. ZTNA controls offer highly granular, robust, real-time controls over connecting machines, thus ensuring only trusted users and devices are able to connect to targets.
- **Privileged and remote session monitoring**. Provides granular control of user activities by monitoring, recording, and auditing privileged user activity (e.g., login, keystrokes and mouse events). Authorized admins can restrict privileged user activities with command filtering or SSH Filter Controls. Admins can also monitor and terminate active sessions. Session video recording and playback are available for further analysis.
- **Built-in DLP and Antivirus capabilities**. Powered by FortiGuard Labs, FortiPAM provides built-in DLP and Antivirus capabilities, ensuring comprehensive protection for File Transfer traffic and alerting on data misuse or leakage. Prevents data exfiltration and blocks unwanted data downloads.
- **Connectivity**. FortiPAM supports a broad range of access protocols for connectivity to target assets, including out-of-the-box and high-profile protocols, such as RDP, SSH, VNC, Telnet, MSSQL, SMB, SCP, HeidiSQL, and others. Further, should a protocol requirement exist which has not been pre-defined, FortiPAM users are able to design a custom protocol launcher.
- **Automated Service Account discovery, and management of privileged accounts and credentials**. Automatically discover, import, and rotate Service Account credentials based on policies, mitigating manual, error-prone processes. Admins can define granular policies (e.g., rotation frequency, password complexity) and hierarchical access approval processes, ensuring compliance and security requirements are met.
- **Certificate storage**. In addition to target and secret Storage, FortiPAM also Securely stores certificates and keys for future deployment and logs all certificate-related activities.
- **Comprehensive reports**. Centralized audit and reporting to meet required compliance mandates. Full tamper-resistant audit trail tracks all user activity and provides enhanced visibility and security.
- **Secure privileged access with Multifactor Authentication (MFA) and Single Sign-On (SSO)**. FortiPAM offers extensive support for authentication protocols, including OOTB support for SAML, RADIUS, and LDAP, with Active Directory integration for assigning user roles and permissions. FortiPAM integrates seamlessly with FortiToken Cloud, enabling contextualized user authentication and a streamlined user access experience.
- **Secure remote user for third-party privileged access**. FortiPAM can easily be configured to enable visitor/guest access. With robust OOTB authentication, FortiPAM is the ideal solution to authenticate external, remote employees/vendors. Adopting a least privileged approach, external visitors may only access the resources explicitly declared by the administrator. In addition, admins can set up an auto-onboarding rule for users in FortiPAM. This process is triggered by the user's first successful login, during which FortiPAM automatically syncs permissions via LDAP, RADIUS, or SAML based on group membership and user role.
- **Integrations**. FortiPAM supports seamless integration with several Fortinet products; FortiClient EMS integration provides continuous ZTNA endpoint validation to ensure privileged user devices are secured before allowing access to sensitive data. FortiToken and FortiAuthenticator integrations provide orchestrated user authentication and authorization workflows to enable MFA, SSO, passwordless access, and more. Customers can even Integrate with FortiSandbox for File transfer operations for deep inspection and threat analysis.

Reduce your identity attack surface and streamline secure access across the hybrid network with FortiPAM

FortiPAM helps organizations mitigate their identity-related exposure and secure human privileged access and credentials, ensuring consistent enforcement of least privilege. The solution, part of Fortinet Security Fabric, provides built-in integration with FortiAuthenticator, FortiToken (Mobile, Cloud, or HW) for a simple unified authentication method and user experience. FortiPAM enables organizations to:

- **Reduce the risk of compromised privileged credentials** — Automatically discover, add, and manage privileged accounts and credentials based on predefined policies, to mitigate the risk of unauthorized access. Privileged session monitoring allows admins to monitor user activity in real-time and terminate suspicious active session.
- **Control and manage service accounts** — Simplify service accounts discovery, credentials onboarding and management.
- **Ensure secure third-party privileged access** — Leverage FortiPAM and FortiToken Cloud integration to enable passwordless and adaptive MFA for fast user validation.
- **Prevent the spread of malware** — FortiPAM leverages built-in DLP and Antivirus capabilities powered by FortiGuard Labs, providing robust protection for session traffic, and alerting on, for example, data misuse, leakage, or file transfer. It is also possible to integrate FortiPAM with FortiSandbox, enabling real time sandboxing of suspicious files and traffic.
- **Drive operational efficiencies and reduce complexity** — With automated privileged-account lifecycle management, from onboarding to secret rotation, auditing and reporting, FortiPAM eliminates human errors, achieving simplicity and enabling scalability.
- **Satisfy audit and compliance requirements** — Provides policy-based privileged access controls, session recording, and detailed audit trails of access activity for retrospective analysis, ensuring compliance with security mandates and industry regulations.

Specifications

FUNCTION
User Management
Local User
Remote Authentication: LDAP Server
Remote Authentication: Radius Server
SAML
MFA: FortiToken
MFA: Email Token
MFA: SMS Token
Administrator Role Management
User Group
API User
User Trusted Host

	FC-10-PA3KG-301-02-DD	Secure RMA Service.
Hardware UG		
FPM-HW-UG	FPM-HW-25UG	Adds 25 users to Privileged Access Management and Secure Remote Access hardware appliance. Stackable license with FortiCare support included.
	FPM-HW-50UG	Adds 50 users to Privileged Access Management and Secure Remote Access hardware appliance. Stackable license with FortiCare support included.
	FPM-HW-100UG	Adds 100 users to Privileged Access Management and Secure Remote Access hardware appliance. Stackable license with FortiCare support included.
	FPM-HW-200UG	Adds 200 users to Privileged Access Management and Secure Remote Access hardware appliance. Stackable license with FortiCare support included.

Ordering Information

Virtual Machines		
FortiPAM-VM with SRA	FC1-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 5 to 9 users. Includes PAM and SRA features, FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
	FC2-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 10 to 24 users. Includes PAM and SRA features, agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
	FC3-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 25 to 49 users. Includes PAM and SRA features, FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
	FC4-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 50 to 99 users. Includes PAM and SRA features, FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
	FC5-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 100 to 249 users. Includes PAM and SRA features, FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
	FC6-10-PAVUL-591-02-DD	Subscription for one FortiPAM virtual machine appliance seat for 250 or more users. Includes PAM and SRA features, FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. Enables HA on DR appliance when purchased separately.
FortiPAM-VM with SRA—Concurrent	FC2-10-PAVUL-1303-02-DD	One year subscription for one FortiPAM Virtual Machine, 6 – 10 Concurrent logon session(s). Includes FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. HA requires additional license.
	FC3-10-PAVUL-1303-02-DD	One year subscription for one FortiPAM Virtual Machine, 11 – 20 Concurrent logon session(s). Includes FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. HA requires additional license.
	FC4-10-PAVUL-1303-02-DD	One year subscription for one FortiPAM Virtual Machine, 21+ Concurrent logon session(s). Includes FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. HA requires additional license.
	FC1-10-PAVUL-1303-02-DD	One year subscription for one FortiPAM Virtual Machine, 1 – 5 Concurrent logon session(s). Includes FortiClient VRS agent for PAM and SRA, Advanced Malware Protection, and FortiCare Premium support. HA requires additional license.
License Options		
FortiPAM License Options		Licensed FortiClient with PAM function activated. This is the recommended deployment as additional SSL VPN, ZTNA, SSOMA functions can also be activated. This uses the existing EMS licenses - no additional license required.
		Dedicated unlicensed standalone FortiClient with PAM function which does not require EMS. This standalone FortiClient can not be combined with other FCT standalone versions and can only be used for FortiPAM.
