FortiToken

Fortinet's multifactor authentication (MFA) solutions are delivered via cloud services or appliances. On the appliance side, FortiGate devices offer native MFA features, while FortiAuthenticator allows for centralizing MFA management across multiple devices.

FortiIdentity Cloud (formerly FortiToken Cloud) is a SaaS that is designed to secure and manage devices through an intuitive interface that supports provisioning from anywhere. It offers organizations the flexibility to deploy robust authentication methods, such as mobile and hardware one-time password (OTP) tokens, SMS and email OTP, and passwordless (FIDO2) passkeys. Moreover, it supports advanced features like local identity provider (IdP) and IdP proxy for seamless SAML and OIDC integration and SCIM integration.

Product Offerings

	CLOUD-MANAGED FORTIIDENTITY CLOUD	DEVICE-MANAGED FORTIGATE/FORTIAUTHENTICATOR
MULTIFACTOR AUTHENTICATION		
Mobile Token with FortiToken Mobile Push	⊘	⊘
