

700 SECURITY APPLIANCES ADVANCED SECURITY, UNCOMPROMISING PERFORMANCE

CHECK POINT 700 APPLIANCES

Advanced Security, Uncompromising Performance

Product Benefits

- All-in-one protection against viruses, spam, bots, dangerous applications and malicious websites
- Continuous security updates from ThreatCloud [™]
- Fast set-up, instant protection
- Secure remote access for your mobile workers
- Easy to understand usage reports
- Cloud management provides security experts without the staffing overhead

Product Features

- Highest ranked Next Generation Firewall
- Simple and intuitive management
- Flexible internet access options including support of external 3G/4G/LTE modem
- Integrated 802.11ac wireless security with guest access

THE SMALL BUSINESS CHALLENGE

Growing both quickly and safely can be difficult for small businesses. As a small business, you worry about survival and as you grow your business in size, you worry about dozens of issues; such as continuing to grow your business, protecting your customers and beating your competition to market. You want a secure network, but how many people can you justify in your IT department? Security does not have to mean a large IT staff.

OUR SOLUTION

The Check Point 700 Appliance family delivers enterprise-grade security in a series of simple and affordable, all-in-one security solutions to protect small business employees, networks and data from cyber-theft. The 700 Security Appliances offer integrated, multi-layered security in a quiet, compact desktop form factor.

Access Control	Threat Prevention	VPN
Firewall	IPS	Remote Access
Application Control	Antivirus	Site-to-Site
URL Filtering	Anti-Bot	
User Awareness	Anti-Spam	

Setup can be done in minutes using pre-defined security policies and our step-by-step configuration wizard. Check Point 700 Appliances are conveniently manageable both locally via a Web interface and centrally by means of the Check Point Security Management Portal (SMP).

Available in two appliances, the 730/750 and the 770/790, these appliances come standard with eight (8) 1-Gigabit or eighteen (18) Ethernet ports respectively. Connect securely from any device direct or through secure authenticated Wi-Fi. The Wi-Fi can be partitioned, separating guest from employee access. Network settings allow for URL and application filtering by employee function, and secure communications between offices is accommodated with VPN. Remote access encrypts data traffic whether you are on the road or in the office. The 700 Appliances offer monitoring of network traffic by users and easily generates activity reports and logs.
