Unified Security Events Across All Domains

The Modern Threat Landscape Is Infinite

The cyber threat landscape becomes increasingly complex and dangerous every year. Cyber-attacks are more sophisticated than ever which makes threat prevention a fundamental component of any organization's security strategy. For many security operations teams, detecting real threats across their entire IT infrastructure is like finding a needle in the haystack. They are often forced to piece together information from multiple, costly, siloed tools and navigate through an absurd number of daily alerts. This combination of challenges - increased threat landscape, SOC teams running 24x7x365, headcount and skill shortages – means that critical attacks are sometimes missed until it's too late.
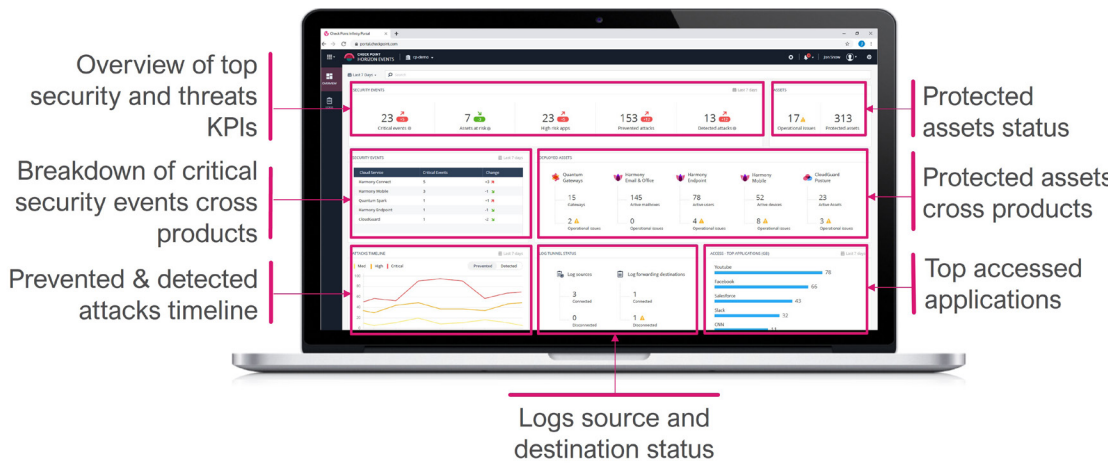

Complete Logs and Events Visibility

Infinity Events provides consolidated event visibility across all Check Point products for efficient monitoring, search, and threat hunting. Designed for security admins and analysts to investigate and troubleshoot all security incidents with a simple and intuitive SaaS cloud solution. It saves valuable time and eliminates complexity by unifying and synchronizing security events across your network, endpoint, mobile, IoT, and cloud environments.

Quickly Search and View Security Logs Across all Check Point Products with Infinity Events

- Search logs from multiple sources in a simple, intuitive manner
- Create custom alerts for critical events
- Single pane of glass for all operation issues
- Cross-accounts view for MSPs and partners
- Globally accessible to all teams
- Fully redundant, regulated and compliant

Overview Dashboard

Overview of top security and threats KPIs

Breakdown of critical security events cross products

Prevented & detected attacks timeline

Protected assets status

Protected assets cross products

Top accessed applications

Logs source and destination status

Overview dashboard provides clear visibility across all your products

Entitlement based on subscription.

Average daily ingestion over a month.

Daily log ingestion by product.

Enforcement will resume automatically after implementing entitlement line, during mid-2024. Allowing you to adjust or address any concerns before enforcement resumes

Consolidated Events: Monitor, Search & Hunt Threats

- Search logs from multiple sources in a simple intuitive manner
- Limitless logs storage and consumption across the globe
- Single pane of glass for all operation issues
- Cross-accounts view for MSPs and partners
