# Looking to the Future with Smart Spaces

Smart spaces bring together the universal connectivity, security, and intelligence to modernize the workspace experience.

But what are technology leaders saying about this accelerated digital transition to smarter spaces? What are the benefits? Where is the room for growth? A recent CIO Dive survey depicts how IT teams across industries are working toward answering these questions.

## Ensuring safe and secure environments

**83%** of IT leaders say **employee security** is of the utmost importance when considering their organization's spaces

**81%** consider the physical safety of spaces just as important as employee security

Over **50%** agree **that building smarter spaces** could be highly beneficial to all aspects of their organization, **especially in regard to security**
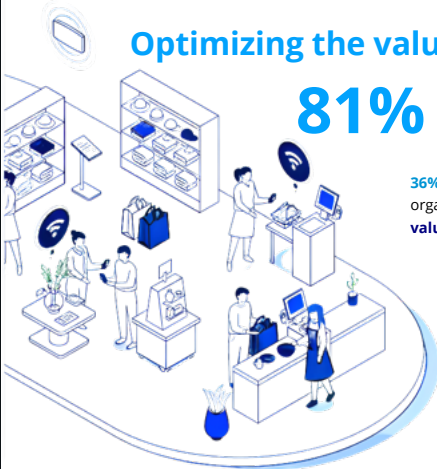

## Optimizing the value of your spaces

**81%** agree that their spaces must promote a **pleasant, productive engagement** with customers, students, and/or end users

**36%** say that **a smart approach** to their organization's spaces could **optimize the value of each space**

**32%** see the value in **building smarter spaces** to **cultivate the most effective environment** for customers and end users

## Enhancing workflow and productivity

**78%** state that their employees believe their **spaces support collaboration**

**52%** of IT leaders report **employee productivity and performance** as the **number one priority** for their organization

**39%** report **workflow and employee turnover** as one of the **biggest challenges** for their organization currently

# Smart spaces are the future. Is your organization ready?
