\* The following page details what's included in the "compliance" and "best practices" levels of self-serve and managed scanning.

*†* As a part of any level of application penetration testing, Trustwave SpiderLabs<sup>®</sup> experts will test your application for every vulnerability our tool can identify. From there, experts will then perform manual testing as noted in the chart.

### **APPLICATION SCANNING**

| WHAT'S INCLUDED?                         | COMP       | LIANCE  | BEST PRACTICES |         |  |
|--|------------|---------|----------------|---------|--|
|  | SELF-SERVE | MANAGED | SELF-SERVE     | MANAGED |  |
| Database Injection Flaws                 | Х          | Х       | Х              | Х       |  |
| Database Errors                          | Х          | Х       | Х              | Х       |  |
| Windows/Unix Command Injection           |            |         | Х              | Х       |  |
| Windows/Unix Relative Path               |            |         | Х              | Х       |  |
| Integer Overflow                         | Х          | Х       | Х              | Х       |  |
| Non-SSL Password                         | Х          | Х       | Х              | Х       |  |
| SSL Checks                               | Х          | Х       | Х              | Х       |  |
| Password Autocomplete                    |            |         | Х              | Х       |  |
| Credit Card Disclosure                   |            |         | Х              | Х       |  |
| Basic Authentication over HTTP           |            |         | Х              | Х       |  |

| Manual Verification of Scan Completeness |            | Х       |                | Х       |  |
| Manual Validation of Scan Results        |            | Х       |                | х       |  |

#### **DATABASE SCANNING**

|                                 | DESCRIPTION   |
|---------------------------------|---|
| Managed Compliance Scanning     | Trustwave managed database compliance scanning service includes four database vulnerability scans validated by Trustwave SpiderLabs experts. A compliance scan provides basic hygiene checks to measure compliance against a variety of compliance regimes.   |
| Managed Best Practices Scanning | Trustwave managed database best practices scanning service includes four database vulnerability scans validated by Trustwave SpiderLabs experts. A best practices scan goes beyond the compli-<br>ance scan to perform all checks against the database that result in actionable findings that if remedi-<br>ated will show measurable improvement in the security of database. |
