

TRUSTWAVE TRUSTKEEPER®

CLOUD & MANAGED SECURITY SERVICES PORTAL

Fight cybercrime, protect data and reduce security risks with help from TrustKeeper. It's more than just an intuitive, easy-to-use portal that offers unique visibility into and control over your security. Behind the scenes, TrustKeeper is a cloud-based gateway to a powerful technology platform that unifies our on-demand security, compliance and intelligence services.

Countless Apps: At the Ready

Our "Security App Bar" offers easy access to the wide variety of tools available within TrustKeeper. Compliance management, managed security services, penetration testing and vulnerability scanning are among the growing list of services found within the portal. App integration and common services like support and online chat bolster the power of using our centralized platform for security and compliance.

Security Built to Scale

Whether your business is large or small or something in between, TrustKeeper is built to scale with you. Small businesses can use our wizards and to-do list to accelerate and track their security and compliance efforts with ease. Enterprises can automate information security and compliance across complex, distributed networks with enterprise-grade managed services.

Visibility on Overdrive

TrustKeeper helps you streamline and automate processes, improve visibility and control complexity. We help you reduce the cost and complexity of managing technologies deployed across your business. TrustKeeper consolidates data from our services and technologies within the portal and through reporting to provide a useful snapshot of security and compliance posture.

Managed Security Services

When you partner with Trustwave for Managed Security Services, TrustKeeper is the portal you use to view and manage events, alerts, trends and reports, as well as the technologies deployed across your business. It's also your hub for interacting with your security analysts within our five, "follow-the-threat" Security Operations Centers.

Penetration Testing

With Trustwave Managed Security Testing, you can more efficiently and regularly identify security weaknesses within networks and applications so you can make improvements that better protect you and your data. Within TrustKeeper, you can schedule, manage and adjust penetration tests based on your business priorities and security needs.

Compliance Management

With modules ranging from PCI Manager with its simple dashboards and wizards-based tools, to Compliance Manager, a powerful multi-compliance management and reporting platform, TrustKeeper helps you automate and streamline your compliance initiatives while improving your security posture, addressing standards including PCI, HIPAA, FISMA, GLBA and more.

Vulnerability Scanning

Trustwave Vulnerability Manager provides complete visibility into network vulnerabilities from outside and inside the corporate firewall, complemented by centralized, visual management. Through the TrustKeeper portal, you get complete visibility and easy management for the most current vulnerability and threat intelligence in the industry.

File Integrity Monitoring

Available in the cloud through TrustKeeper, Trustwave File Integrity Monitoring can alert you to the presence of malware in your network, harmful or non-compliant misconfiguration or unauthorized access to your sensitive data by monitoring changes to your critical files.
