# Eaton NetWatch Software Version 5.0

Shut down individual load segments without powering down all connected equipment.

Choose which shutdown and communication options best fit your needs.

NetWatch 5.0 UPS connectivity software is a critical component of Eaton's network shutdown solution. The NetWatch client software acts as a network-monitoring tool through a ConnectUPS Web/SNMP card, BestLink Web/SNMP adapter or the Eaton® Network Management Card (NMC). NetWatch allows you to configure up to 255 network clients to monitor the activity of a single UPS.

During an extended power failure, NetWatch works in conjunction with a network card to enable the automatic and graceful shutdown of your UPS-protected devices, such as servers or workstations. The card informs all registered NetWatch clients that it is time to shut down their respective operating systems, thus preparing them for the removal of AC power. NetWatch's robust configuration options also enable you to schedule shutdown and restart operations, and to receive user notifications.

NetWatch is now compatible with ESXi virtualization software from VMware. NetWatch handles extended power failures in a virtualized environment by sequentially shutting down the virtual machines before shutting down the host server, ensuring that no data is lost.

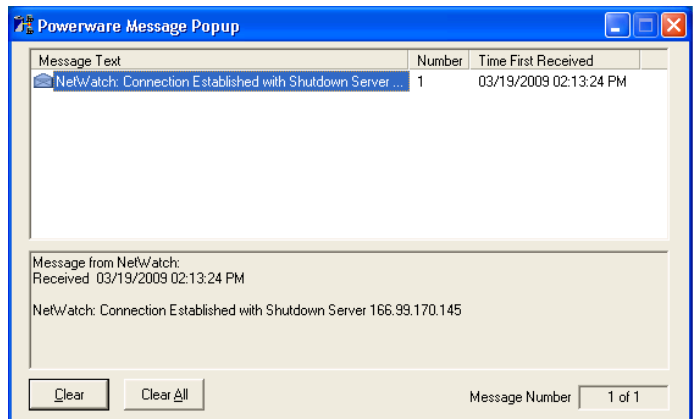

NetWatch Client 5.0 has met the Cisco Technology Developer Program test criteria for interoperability with Cisco's Unified Communications Manager 4.3. NetWatch enables safe, unattended shutdown and restart of Cisco Unified Communications in the event of a power loss.

NetWatch software comes free on the Eaton Software Suite CD that is standard with most Eaton UPSs. NetWatch can also be downloaded from www.powerware.com/Software/Netwatch_V5_info.asp.

Eaton NetWatch Client 5.0 has tested compatible with Cisco Unified Communications Manager 4.3. Go to www.eaton.com/PQ/cisco for disclaimer.
