## **Emergency Lighting UPS**

20 kVA 208V pictured

#### **Product Snapshot**

Power Rating: 10 to 30 kVA

**Topology**: Double-conversion

online UPS

Battery Runtime: Minimum 90 minutes

at full load

Frequency: 50/60 Hz auto-sensing

Voltage: 208/208, 277/277, 480/277

Emergency lighting requirements and related building codes are vital in commercial structures to facilitate occupant egress during a building fire or other emergency situation. Eaton's emergency lighting UPSs are UL 924 tested and certified, providing the industry's highest capacity and smallest footprint solution.

## Eaton's Emergency Lighting UPS solutions are perfect for:

- Hospitals
- Manufacturing facilities
- Schools
- Hotels
- Government buildings
- Commercial buildings
- Office buildings

# Eaton meets the strict standards for UL 924 Compliance

## Providing you confidence in your emergency lighting solution

#### 90 minutes of backup

 All Eaton emergency lighting UPS solutions are configured with external line and match battery cabinets to provide 90 minutes of backup time, which is required by the UL 924 standard.

#### Manually operated test switch

• The emergency lighting product line features manually operated test switches for conducting the mandated standard equipment tests.

#### Protected test switch and interface

• In accordance with the standard, the manually operated test switch and interface are protected from accidental operation and protected from non-authorized users.

In order to avoid building/safety code inspection delays during the commissioning of new facilities or retrofits of existing facilities, emergency lighting systems must be UL 924 listed. Remember only systems supplied from one manufacturer that are tested and approved by UL can carry the UL 924 listing.

Eaton's UPSs are backed by an extensive service network of over 240 field technicians, providing prompt service, full maintenance and stocked replacement parts not available from other vendors or providers.

### Connectivity & manageability

#### Enhanced communication capabilities

UL 924 UPSs are equipped with a variety of standard communications features for network connectivity and remote management applications, including:

- RS-232 serial port
- Two X-Slot® communication bays
- Relay output contacts
- Two programmable signal inputs

#### Centralized control and visibility

#### **Intelligent Power Manager software for monitoring**

Eaton's Intelligent Power Manager (IPM) software allows the consolidation of monitoring and management of your emergency lighting UPSs. Any PC with an Internet browser and network connection can access status and power conditions of Eaton's emergency lighting UPSs, providing you the comfort that your systems are operating correctly.

IPM software is free for monitoring up to 10 devices. For locations with more than 10 devices, licenses can be purchased based on the number of units to be monitored.

#### Service

#### Proven warranty and support services

Customers consistently rank Eaton number one in providing quality service; our comprehensive, world-class solutions are designed to improve costs, uptime, reliability, power quality and safety. With 240 field service technicians in North America and 1,200 international authorized service providers, Eaton has more service personnel than any other UPS manufacturer, coverage that ensures your emergency lighting and egress solutions are addressed in a timely fashion.

The standard factory warranty covers:

- System warranty: One year parts / 90 days labor
- Battery warranty: Two years parts / 90 days labor

#### Extensive service options for enhanced reliability

For support beyond the warranty period, Eaton offers enhanced service options including onsite startup, corrective and preventive maintenance, battery solutions, training, remote monitoring and factory spare parts and upgrades. Customizable three-phase UPS services packages allow customers to select the plan that provides the right combination of system uptime, convenience and value.

#### eNotify Remote Monitoring

Eaton's optional eNotify Remote Monitoring Service provides 24x7 real-time monitoring of the UPS and battery systems and alerts both service technicians and the customer when a problem is detected. Proactive monitoring enables technical experts to respond immediately to more than 40 alarm conditions and, in many cases, resolve issues remotely with minimal or no downtime. Additional eNotify benefits include:

- One-way outbound status and event e-mails for security and reliability
- Fast diagnosis and notification of critical alarms
- Monthly customer reports including power event logs and overall UPS and battery health summaries
