DATASHEET

WATCHGUARD TOTAL NDR

WatchGuard Total NDR delivers unified threat detection and automated response across endpoints, networks, and user identities. Integrating telemetry from multiple sources enables faster threat correlation, real-time response, and deep visibility into attacks. This reduces complexity for IT teams, shortens response times, and strengthens overall security posture. With built-in AI-driven analytics and automation, WatchGuard Total NDR minimizes manual effort, improves accuracy, and helps organizations stay ahead of evolving cyber threats through a single, easy-to-manage platform.

UNIFY THREAT VISIBILITY

See Risks Across Your Hybrid Network

To identify cybersecurity gaps, it's important to have a unified view of the risks present across networks, cloud platforms, and SaaS applications. WatchGuard Total NDR offers a comprehensive view of abnormal and risky activities, enabling cyber defenders to quickly identify vulnerabilities and address them based on risk priority using ThreatSync's risk-scoring capabilities.

Detect and Stop Attacks, Minimize Dwell Time

Total NDR continuously searches for early signs of cyberattacks and immediately alerts cyber teams. Using a combination of cyber TTP policies, threat intelligence, and AI, it provides a short, prioritized list of alerts and threat reports. These reports correlate results and define the threat, enabling cyber defenders to respond quickly.

Continuous Compliance with Reporting

Total NDR combines hundreds of pre-built ISO 27001, NIST 800-53, and Cyber Essentials network, cloud, and SaaS application policy controls with WatchGuard's automated compliance reporting engine. It's a time- and cost-saving solution that supports FFIEC, NIST, ISO, NIAC, CMMC, and many more, while delivering continuous compliance capabilities.

WatchGuard ThreatSync, the technology that supports Total NDR, puts security experts back in charge of their security stack with widely unified visibility, cross-detection, automated response to threats, and features suitable for any organization, regardless of budget, size, or complexity.

BENEFITS

Greater Visibility
into network activity, helping to identify threats that might otherwise go undetected

Comprehensive Security
by unifying data and alerts into a single platform where solutions can work together to prioritize and respond to threats

Reduce Security Team Burdens
by automating the threat detection and response process and freeing up time and resources for security teams

Streamline Response Process
providing coordinated and automated responses to detected threats

No Added Costs to Access NDR
is an essential tenet of modern cybersecurity that should be accessible to every business. As such, WatchGuard includes ThreatSync at no additional cost

THREAT AND COMPLIANCE VISIBILITY

One Dashboard for All Your Threats

WatchGuard Total NDR is an open NDR platform that's part of WatchGuard's Unified Security Platform architecture. It is designed to provide a correlated view of risks and threats across an organization's entire ecosystem, from network to cloud to users to endpoints to devices. Using AI-based correlation for threat detection and remediation reduces the time taken for remediation (MTTR) and simplifies the entire security operations process. WatchGuard Total NDR enables cyber defenders to work smarter and more efficiently than ever.

Experience a Unified NDR Solution

WatchGuard Total NDR is an integrated 100% cloud-native platform explicitly designed for resource-constrained teams. An open NDR solution, it deploys across multiple locations in hours, integrating with existing environments and utilizing automation to eliminate the need for complex stovepipe security operations. WatchGuard Total NDR delivers rapid time to value with a TCO that is, on average, 50% less than existing NDR products.

KEY CAPABILITIES

- North/south and east/west network threat detection correlated with cloud, SaaS, device, and user threats.
- Integration with Firebox and FireCloud, EPDR, third-party firewalls, third-party routers and switches, Azure, M365, AWS, Google, SIEMs, SOAR, and response ticketing systems.
- Out-of-the-box ransomware, network, cloud, M365, and risk and threat reports mapped to best practice and remediation guidance.
- Continuous compliance reporting for major compliance frameworks and regulatory laws, including NIST-800-53 and 171, DIFARS, and CMMC, FFIEC, ISO-27001, Cyber Essentials, NIS 2, DORA, and more.
