

- **Enhances built-in zero day protection** to provide maximum defense against spyware and other network threats
- **Supports popular protocols** including HTTP, FTP, SMTP, and POP3
- **Stops known attack sources** to repel repeat exploits
- **Locks infected attachments** to prevent desktop execution of malicious payloads
- **Updates signatures automatically** so you are always protected
- **Blocked sites list** prevents access to spyware distribution sites

Earth-friendly technology

Stop Spyware and Other Malicious Activity in Real Time

Gateway AntiVirus/Intrusion Prevention Service (Gateway AV/IPS) is a signature-based, integrated security subscription for the Firebox® X family of unified threat management (UTM) appliances. It works in tandem with the built-in zero day attack prevention of the Firebox X firewall to provide superior, real-time protection against known spyware, viruses, application exploits, and blended threats.

Enhances Zero Day Protection

The intelligent layered architecture of the Firebox X proactively blocks many viruses, trojans, spyware intrusions, buffer overflows, and other threats through its sophisticated application proxy technology. The signature-based scanning of Gateway AV/IPS complements this zero day protection by blocking threats that are delivered in non-suspicious traffic. Combining zero day and signature-based defenses adds up to an unbeatable combination of security capabilities to keep your network safe.

Highly Efficient, Continually Updated

The technology behind Gateway AV/IPS is fast and strong. The AV signature database is made up of thousands of virus signatures, including WildList and zoo* viruses, for wide-ranging coverage. The Intrusion Prevention (IPS) component has a proven commercial signature set, designed for efficiency. Signatures are updated without interruption, so your network always has up-to-the-minute protection.

Blocks Known Attack Sources

Once an IP address has been positively identified as the source of an attack, future attacks coming from that IP address are dynamically and proactively blocked. This prevents further malicious traffic from accessing your network. Gateway AV/IPS also offers configurable whitelists, which enable you to define systems that should never be blocked. With trusted applications and destinations available for continuous access, your organization can carry on with business as usual.

Unbeatable Ease of Use

You can have Gateway AV/IPS up and running in minutes, and an intuitive interface keeps ongoing management simple and straightforward. On Firebox X Peak™ and Core™ appliances, and Firebox X Edge appliances on a Peak or Core network, Gateway AV/IPS is managed with the powerful WatchGuard System Manager (WSM). Stand-alone Firebox X Edge appliances use an intuitive web-based UI.

WatchGuard System Manager view of Gateway AV/IPS shows malware blocked in real time at the gateway, before it can enter your network and disable your desktop and server security

Keeps Spyware Out of the Network

With Gateway AV/IPS, your blocked sites list is constantly updated to protect your network from spyware. Multi-layered anti-spyware blocks access to known spyware sites,* drive-by spyware attempting to enter the network as a result of web surfing, and spyware attempting to contact its host.* All actions are logged and available for easy reporting.

All Major Traffic Protocols Scanned Up Front

Gateway AV/IPS scans HTTP, FTP, SMTP, and POP3 traffic and blocks file types associated with malware at the gateway. This means threats are stopped before they can enter your network and disable desktop and server security, saving you the expense and administration time of cleaning up after an attack.

Locks Infected Attachments

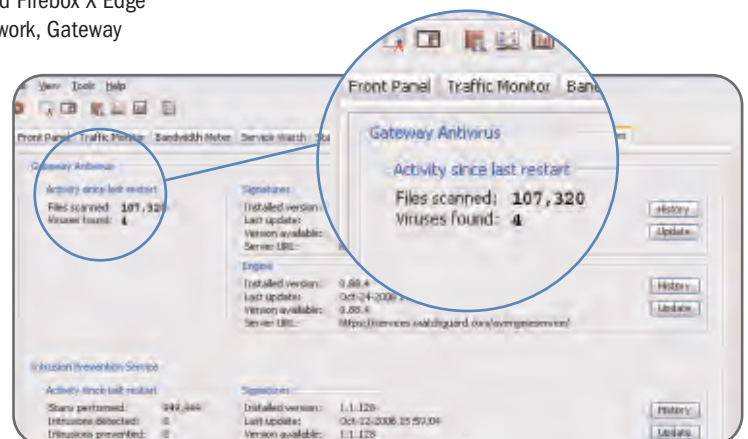

Gateway AV/IPS gives you the flexibility to enable the network to allow, block, or lock* questionable traffic, based on type, user/group,* protocol, and severity.

By locking all attachments it identifies as suspicious, Gateway AV/IPS prevents execution of malicious payloads at the desktop. To provide the most solid and efficient protection,* Gateway AV/IPS scans a variety of compressed and encoded file types, including ZIP, TAR, and GZIP.

New! AV Quarantine Feature

Now email caught by the AV engine can be quarantined and IT administrators are able to see which emails are infected. This allows files to be cleaned safely, so users don't lose mission-critical attachments that may have been infected.

**Available on Firebox X Peak and Firebox X Core appliances.*

Security Subscriptions Boost Protection

To enhance the built-in zero day attack prevention of the Firebox® X, you can add security subscriptions for even greater levels of protection. Security subscriptions are easy to enable on your Firebox X using a simple license key. That's it – no extra hardware to buy! Along with Gateway AV/IPS, our suite of security subscriptions includes:

- **spamBlocker with virus outbreak protection:** Best in the industry at distinguishing legitimate communications from spam outbreaks in real-time, blocking nearly 100% of unwanted emails and the viruses they carry. Blocks spam regardless of the language, format, or content of the message.
- **WebBlocker:** Manage your users' web surfing to increase productivity, prevent legal liabilities, and decrease security risks by blocking HTTP and HTTPS access to malicious or inappropriate web content.

These fully integrated subscriptions are easy to deploy and manage on the Firebox X. Each is priced per appliance rather than per user, so one subscription provides network-wide protection for all users configured behind your Firebox X.

FREE 30-day trials

Get free 30-day trials of **Gateway AntiVirus/Intrusion Prevention Service, spamBlocker, and WebBlocker** for your Firebox X Peak, Core, or Edge. Contact your reseller for details.

UTM Bundle – One Solution, One License, One Great Price

Now everything you need for comprehensive unified threat management is in one convenient package, including the appliance. An exceptional value!

- Firebox X Peak, Core, or Edge security appliance
- One-year subscriptions to spamBlocker, Gateway AV/IPS, and WebBlocker
- One-year subscription to LiveSecurity® Service for expert guidance and support

UTM Software Suite for Firebox X Networks

Add our powerful suite of security subscriptions to your existing Firebox X e-Series network at a great price with just one purchase. The UTM Software Suite turns your Firebox X into a complete unified threat management solution with:

- One-year subscriptions to spamBlocker, Gateway AV/IPS, and WebBlocker
- One-year subscription to LiveSecurity Service for expert guidance and support
