

- Real-time spam detection for immediate protection
- Blocks nearly 100% of unwanted email
- New! Virus outbreak detection
- Recognizes spam regardless of language, content, or format
- Cost-effective anti-spam solution
- Allows spam quarantine review
- Fully integrated with the Firebox X

Earth-friendly technology

For Real-Time Protection from Spam and Email Viruses

Spam accounts for up to 95% of global email traffic and remains the most common method of spreading viruses. It also bogs down network traffic, and leads unsuspecting users to malicious web sites designed to steal sensitive personal or company data. But pervasive as it is, you still have the ability to stop spam cold along with the malware it spreads, by adding a spamBlocker subscription to your WatchGuard® Firebox® X firewall.

Stop Spam in Real Time

spamBlocker relies on unique real-time detection for immediate protection from spam outbreaks. It's the best solution in the industry at distinguishing legitimate communication from spam outbreaks in real time, blocking nearly 100% of unwanted emails.

Cost Effective Solution

spamBlocker is subscription-based and easily integrates on the Firebox, eliminating the need to purchase and manage an additional anti-spam solution. There's no costly per-user licensing – a single subscription provides network-wide protection for all users configured behind your Firebox X.

How It Works

spamBlocker uses Recurrent Pattern Detection (RPD™) technology, which monitors the Internet for distinct patterns in global email traffic. Sophisticated algorithms analyze email patterns, looking for identical messages sent in high volume with distinct distribution characteristics. It distinguishes spam from commercial bulk mail by assessing information about the sender using continually updated whitelists, blacklists, and other factors. RPD has proven itself exceedingly fast, efficient, and thoroughly effective in identifying and blocking spam attacks as they emerge so you can safely and productively handle email.

Why It's Stronger

Because the RPD technology behind spamBlocker assesses the crucial characteristics of a spam outbreak, rather than struggling to evaluate the words within a message, it is able to identify spam regardless of the language or format of the email. Even the image-based spam that other anti-spam products miss is quickly caught by RPD and prevented from entering your network.

It Keeps the Spam Battle off Your Servers

Because spamBlocker relies on technologies that track spam from its point of origin, the spam is identified and removed before it ever reaches your internal mail server or mail client. You are saved from storage costs and management time, as well as the risks inherent in handling virus-laden communications.

New! Virus Outbreak Detection

Now spamBlocker is even more powerful with a new layer of real-time anti-virus protection. Employing the same RPD technology used for spam identification and extracting patterns from executable content (attachments), it can recognize and stop malware with near 100% accuracy.

Take the Controls or Use Auto-Pilot

You can have spamBlocker up and running in minutes, while an intuitive interface makes ongoing management simple and straight-forward, even for novice network administrators. You can use spamBlocker in ways that are simple or you can choose to have fine-grain control of your solution. It provides the flexibility to:

- Block,* allow, and tag mail for easy identification and forwarding to dedicated Exchange folders
- Decide how messages will be processed, and which users or groups can receive bulk mail
- Use flexible whitelists to allow mail from trusted domains

*SMTP email servers only

Get the Emails You Want and Need

Programs that aggressively define keywords and content to detect spam often cause high rates of false positives, blocking legitimate communications along with spam. Because spamBlocker does not need keywords or content to recognize spam, your business-critical communications pass through and only unwanted emails and viral payloads are stopped.

Integrated Quarantine

spamBlocker includes an integrated quarantine* to store email that belongs in the "suspected spam" category. End users can review these messages through a low-bandwidth web page, rather than having to download risky spam to their email client. This allows users to personalize spam protection, while reducing IT administration.

*Available on Firebox X Core and Peak appliances only

Security Subscriptions Boost Protection

To enhance the built-in zero day attack prevention of the Firebox® X, you can add security subscriptions for even greater levels of protection. Subscriptions are easy to enable on your Firebox X using a simple license key. That's it – no extra hardware to buy! Along with spamBlocker, our suite of security subscriptions includes:

- **Gateway AntiVirus/Intrusion Prevention Service with anti-spyware:** Powerful signature-based scanning at the gateway stops known spyware, viruses, trojans, and other malware before they can enter your network.
- **WebBlocker:** Manage your users' web surfing to increase productivity, prevent legal liabilities, and decrease security risks by blocking HTTP and HTTPS access to malicious or inappropriate web content.

These fully integrated security subscriptions are easy to deploy and manage on the Firebox X. Each is priced per appliance rather than per user, so one subscription provides network-wide protection for all users configured behind your Firebox X.

FREE 30-day trials

Get free 30-day trials of **Gateway AntiVirus/Intrusion Prevention Service, spamBlocker, and WebBlocker** for your Firebox X Peak, Core, or Edge. Contact your reseller for details.

UTM Bundle – One Solution, One License, One Great Price

Now everything you need for comprehensive unified threat management is in one convenient package, including the appliance. An exceptional value!

- Firebox X Peak, Core, or Edge security appliance
- One-year subscriptions to spamBlocker, Gateway AV/IPS, and WebBlocker
- One-year subscription to LiveSecurity® Service for expert guidance and support
