WS_FTP Server Integrated Modules

› **Ad Hoc Transfer module** lets users send files securely to one or more individuals by sending an email via a Microsoft® Outlook® plugin (2013 and 2016) or their web browser. With this module, organizations can improve the way they manage file transfer interactions and apply encryption, access control and authentication, digital loss prevention, and content management.

› **Web Transfer module** enables employees and external business partners to transfer files, data and other critical business information securely between their computers and the WS_FTP Server over HTTPS using a web browser.

WS_FTP Server Optional Feature

› **Failover option** ensures high availability by deploying a second WS_FTP Server in a failover configuration. This is especially important in meeting service-level agreements or ensuring that other mission-critical processes are always up and running. With failover, organizations can ensure uninterrupted file transfer service for increased uptime, reliability, and performance.

See for yourself why tens of thousands of customers and millions of users around the globe trust WS_FTP for its security, quality and reliability.
