# IRONKEY™ WORKSPACE PROVISIONING TOOL & SCRIPTABLE COMMAND LINE UTILITY

EASILY DEPLOY WINDOWS TO GO DESKTOPS

Equipping your mobile workplace with fully functional Microsoft Windows 8/8.1 or Windows 10 desktops doesn't have to be the time-consuming, manual, multi-step process you've put up with for years.

With the IronKey Workspace Provisioning Tool, you can quickly and easily deploy certified Windows To Go environments on IronKey Workspace USB flash drives. This IronKey solution allows you to simultaneously provision as many as 14 devices in as little as 20 minutes via a fully automated process that sets up in minutes, with just a few clicks.

With the IronKey Workspace Command Line Utility, the company's recent addition of scriptable deployment capabilities, you can now provision hardware-encrypted IronKey Workspace W500 and W700 devices in a scripted work flow.[1] The scripts will also provision IronKey Workspace W300 drives. Using scripts to provision Windows To Go drives reduces the cycle time when deploying large volumes of devices. Script files are portable so you can run the same provisioning script on different computers in parallel. You can also use the IronKey Workspace Command Line Utility to provision the W500 and W700 devices using Microsoft System Center Configuration Manager (SCCM).

Only IronKey offers secure workspace products for Windows To Go that integrate into today's high cadence device provisioning workflows. This new capability further simplifies and more fully integrates Windows To Go device deployment for enterprises that script the preparation and deployment of their laptops and desktops.

IT'S FAST

The IronKey Workspace Provisioning Tool is a powerful software utility that runs on Windows 8/8.1, or Windows 10 PCs or laptops equipped with two or more USB 3.0 ports. The tool works with third-party USB hubs (see Recommended Hardware), so you can provision multiple IronKey Workspace drives at once. Use it to provision up to 14 Windows To Go devices in as little as 20 minutes – or 40 minutes when you select the remote BIOS updates option for IronKey Workspace drives.

FAST, EASY AND AUTOMATED

Windows To Go solution rapidly and automatically provisions Windows desktops protected by IronKey USB flash drives

Windows 8/8.1 or Windows 10 software utility works with IronKey verified USB 3.0 hubs

Provision up to 14 IronKey Workspace drives in as little as 20 minutes

Intuitive control panel makes it easy to select from multiple Golden Image copies for provisioning

Choose 32-bit or 64-bit format, managed or unmanaged drives, and remote BIOS update

RECOMMENDED PC HARDWARE*

Dell Latitude Laptop, 2.5 GHz Intel i5 Series processor w/ 3M cache

Windows 8/8.1 or Windows 10

4GB SDRAM at 1333MHz

320GB 7200 RPM hard drive

2 USB 3.0 Ports

FAST, CONVENIENT AND DEPENDABLE

Plugable 7-Port Usb 3.0 Hub (Usb3-Hub7-81X)

*Tested and verified to provide reliable performance with the IronKey Workspace Provisioning Tool

IRONKEY WORKSPACE PROVISIONING TOOL & SCRIPTABLE COMMAND LINE UTILITY

IT'S SCRIPTABLE

The IronKey Workspace Command Line Utility provides the industry's only solution for including both hardware and software encrypted Windows To Go devices (excluding W700SC) in a typical desktop and laptop scripted preparation flows. Integrate IronKey devices easily into your device preparation flows leveraging Batch and PowerShell script samples, and integrate into your SCCM deployment flows as required. The capabilities of the IronKey Workspace Command Line Utility reduces the need for custom set-up scenarios.

IT'S SIMPLE

Create your Golden Windows Image – the corporate desktop you want provisioned on your Workspace devices – and then either use the intuitive interface of the Provisioning Tool, or your own customized scripts and Workspace Command Line Utility to create your drives.

IT'S AUTOMATED

Replace clumsy, manual provisioning with an automated process that's as easy as hitting GO. No more constant monitoring, stopping and restarting.

IT'S SCALABLE

Deploy redundant IronKey Provisioning Tool solutions, or deploy scripts to multiple machines using SCCM, to provision 28, 42, 56 or more devices at once.

IT'S INTEGRATED

Not only can IT Pros install the Windows corporate image on Windows To Go devices, they can now perform common post provisioning tasks utilizing existing scripts for domain joins, software updates, VPN clients and more.

IT'S IRONKEY

Flexible, reliable and enterprise-ready, the IronKey Provisioning Tool is designed exclusively to create portable Windows 8/8.1 and Windows 10 workspaces on trusted IronKey flash drives. With IronKey, you can confidently and rapidly arm any department or team with Microsoft desktops for Windows To Go. Deploy any combination of IronKey Workspace drives, including the W300 with 256-bit AES full-disk encryption, the hardware-encrypted with optional management W500, and the FIPS 140-2 Level 3 validated W700/W700SC which also can be manageable and features support for Section 508 compliance and CAC/PIV smart cards (W700SC only). All IronKey Workspace drives transform any computer into an IT-managed workstation while safeguarding data and applications with strong password protection.

[1.] Scriptable Command Line Utility is not compatible with IronKey Workspace W700SC devices; the Provisioning Tool can still be used
