The Home Wi-Fi that Covers the World

AmpliFi™ Teleport provides a secure and convenient way to access resources at home, even when you are not. Utilizing any Wi-Fi hotspot or wired Ethernet connection, Teleport is able to create an encrypted connection to your home network, expanding it wherever you go.

Teleport works in two parts – an AmpliFi HD Router runs your home network and Wi-Fi while AmpliFi Teleport, which is a portable hardware extension to the router, makes the home network and its internet connection available from a different location.

The AmpliFi HD Router has a dual-band 802.11ac 3x3 MIMO Wi-Fi, multiple self-configuring radios and advanced antenna technology, bringing full Wi-Fi coverage throughout your home.

AmpliFi Teleport is a compact, portable plug-in device that provides both an Ethernet port and Wi-Fi connectivity, either of which can be used to connect to the internet or simply network your devices together.
