NOMADIX®

Realize Dramatic Cost Savings by Moving to Reliable Cloud PBX Service

Most hotel phones sit and collect dust with guests using their own mobile devices to make calls. Many were installed years ago, and hoteliers are dealing with high maintenance costs of antiquated phones and phone systems that need to be replaced in the near future.

Despite decreased guest usage of in-room phones, hotels must still comply with Kari's Law in the U.S. and Telecom Decision CRTC 2007-44 in Canada. Properties need to offer reliable emergency calling options with high sound quality and location information to ensure guest safety in each hotel room.

Nomadix offers a reliable, private branch exchange (PBX) cloud service at a fraction of the price of traditional PBX solutions and is fully compatible with all U.S. and Canadian emergency requirements. Numerous phone options are available to fit the needs of each hotel room and administrative location. Additionally through our partnership with Angie Hospitality, Nomadix can offer the option of Angie guest room assistants as the in-room phone, providing voice-activated or touchscreen-enabled dialing.

Making the switch to Nomadix simultaneously upgrades outdated equipment while saving the hotel money each month. Only pay for what is needed and what guests actually use.

FEATURES & BENEFITS

Cloud-based PBX solution with monthly fee structure is a cost-effective replacement for legacy analog solutions that are increasingly expensive to support.

All current E911 standards for the U.S., including the newest 'Dispatchable Locations' requirement by the FCC, and Telecom Decision CRTC 2007-44 requirements in Canada are supported.

Comprehensive administrative and front desk capabilities include voicemail, call forwarding, emergency-calling notification and conference calling.

Standard hospitality features such as internal calls, voicemail, room-to-room calls and more are provided.

Angie voice-enabled guest room assistant phone option available.

CIP270 IP PHONES

The CIP270 is the most robust of our CIP phones, supporting up to 16 accounts. Perfect for an office or a reception desk.

CIP250 IP PHONES

The CIP250 is the perfect general office phone, supporting up to 8 accounts. This is our most popular phone for and would be appropriate for reception or upscale guest.

CIP230 IP PHONES

The CIP230 is our most economical model, supporting up to 4 accounts. The phone offers a footprint appropriate for guest rooms.

HOW IT WORKS

The cloud-managed Nomadix PBX service provides telephony capabilities with clear HD voice technology for guest rooms and front desk/administrative locations in the hotel.

Nomadix IP guest and administrative phones are easy to configure to get the service up and running. By eliminating servers and other equipment on site, the set-up process is simple and quick. If a property is migrating to Nomadix PBX, existing numbers can be rolled over to the new service.

Nomadix offers three IP phones with options such as built-in Wi-Fi, LED screens and headsets to meet the needs of the hotel. The service is also compatible with most SIP/IP phones on the market.

For hotels that choose the Angie guest room assistant solution, functionality to fulfill guest requests and answer questions about the hotel and nearby attractions is added. Angie can also integrate with existing hotel systems to provide a touchless, voice-enabled inter-face to control the thermostat, lights, TV and more. This eliminates many touchpoints to increase safety precautions and provide more efficiency.

AVAILABILITY

The Nomadix PBX cloud service and IP phones are generally available in the U.S. and Canada. Angie guest room assistants are generally available in all regions.
