

Application Readiness: 5 Steps to Automated Application Readiness

Discovery

Automatically Discover and catalogue all applications that are in your environment. Both managed and rogue applications

Plan & Rationalize

What applications are licensed, Who's using what and how frequent they are used. Remove old versions, duplicates and non-vendor supported apps

Assess Compatibility

Test all of your applications concurrently for suitability for deployment on new Desktop, Virtual, Office and Browser platforms. Gain incredible insight into problem apps, finite detail of each individual issue and step by step guidance for how to remediate each issue

Remediate & Package

Remediate incompatibilities on the fly inside ChangeBASE's automated workflow. Providing good to go applications ready for deployment on multiple new platforms. Leverage automated sequencing to convert fat applications into virtual packages. Edit applications with the ChangeBASE repackaging tool

Business As Usual

React to change within seconds. Whether it be monthly Microsoft patches, or application updates, even platform updates. ChangeBASE becomes the core of your application lifecycle management workflow to proactively manage and be flexible to an ever changing workspace
