

Top 5 Takeaways

Security Outcomes Study: Endpoint Edition

1. Security is a constant battle.

According to our recent survey, **over 40% of organizations** suffered a major security incident or loss over the past couple of years. Industries hit the hardest include **hospitality and education**, both with **over 50% of organizations** reporting major incidents.

2. As attackers evolve, so too must our protections.

With the exodus of workers out of the office and into their homes, endpoint security has become even more critical. It serves as the **last line of defense** for today's organizations, and provides essential insight into user behaviors that can impact risk.

3. Through a **survey** of more than 4,800 IT and security professionals across 25 different countries, we found that strong endpoint protection can help organizations build **better cybersecurity programs** and achieve many key objectives, including:

Avoiding major incidents

Managing top risks

Meeting compliance regulations

Streamlining incident response

Running cost-effectively

...and much more.

4. **How?** By helping them adhere to a series of best practices that measurably impact security outcomes, such as:

Accurately detecting threats

Tracking performance metrics

Embracing automation

Proactively refreshing technology

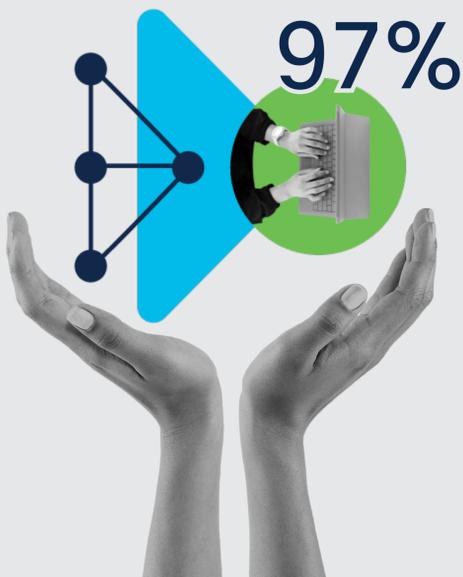

Deploying well-integrated solutions

5. Technology integration in particular was shown to play a crucial role in security success.

According to our study, organizations that prioritize well-integrated security solutions versus simply choosing the least expensive tools are **22% less likely** to experience a major security incident.

22%

Cisco Secure Endpoint is the industry's only endpoint protection that includes a built-in platform, **Cisco SecureX**, for seamless integration with other vital security technologies.

Additionally, Cisco Secure Endpoint combines multiple prevention techniques for both user and device security into a single solution to effectively mitigate a diverse range of threats – reducing remediation time by **up to 97%**.
