

Security Awareness Training: Autopilot feature

Effortless, automated training and phishing simulations to combat human error in cybersecurity

Benefits

- Automates cybersecurity training to minimize administrative effort
- Provides real-time insights to monitor training impact
- Aligns with NIST standards for compliance support
- Scales effortlessly for SMBs and MSPs

Human error remains a leading cause of successful cybersecurity breaches. According to the 2024 Verizon Threat Report, “68 percent of breaches involved a non-malicious human element,” underscoring the need for consistent and effective training. Security Awareness Training (SAT) with Autopilot simplifies employee education and equips organizations to mitigate risks from evolving threats, including AI-driven attacks.

Simplified security awareness training

The SAT Autopilot feature automates your organization’s cybersecurity education, delivering impactful training and phishing simulations with minimal effort. This turnkey solution ensures employees stay informed and prepared to combat real-world threats—all while reducing administrative overhead.

What is Autopilot?

Autopilot is designed to seamlessly enhance cybersecurity awareness. It delivers pre-configured, automated campaigns aligned with best practices and NIST guidelines. The feature emphasizes two key areas:

- Educating users on cybersecurity best practices.
- Reinforcing knowledge through realistic phishing simulations

With Autopilot, employees spend only minutes per month learning essential skills while administrators enjoy a low-maintenance experience.

Key features

Pre-configured campaigns	Campaigns are crafted according to industry standards, delivering consistent training and simulations aligned with NIST guidelines.
Automated delivery	Autopilot manages training delivery, sending users tailored monthly campaigns to keep cybersecurity top of mind.
Real-time insights	Gain visibility into campaign performance with an intuitive dashboard, real-time activity monitoring, and automatic summary reports.
Rolling schedule for fresh content	Stay ahead of emerging threats with constantly updated content reflecting the latest cybersecurity trends.

Why choose Autopilot?

- **Efficient:** Reduces administrative burden while maintaining continuous engagement.
- **Effective:** Strengthens cybersecurity skills with real-world scenarios.
- **Regulatory compliance:** Supports NIST compliance efforts.
- **Scalable:** Perfect for SMBs and MSPs, enabling comprehensive training without resource strain.

Conclusion

Security Awareness Training with Autopilot empowers organizations to combat human error—the leading cause of cybersecurity breaches—through automated, effective, and scalable training solutions. By leveraging pre-configured campaigns, real-time insights, and continuously updated content, Autopilot ensures your team stays vigilant against evolving threats while minimizing administrative effort.

Whether you're an SMB or MSP, Autopilot provides an effortless path to stronger cybersecurity awareness and compliance. Safeguard your organization today with OpenText's innovative approach to security education.
