

SonicWall AI for Monitoring and Insight (SAMI)

Your AI-powered assistant, built for MSPs and MSSPs, available in SonicWall Unified Management.

MSPs juggle a lot with limited time and resources, all while making sure that every customer's needs are met. As their customer base grows, they need to make sure each administrator is empowered to manage their customer's IT and network security as effortlessly as possible, even with the same resources.

Generative AI unlocks the ability for administrators to maximize and even potentially multiply their efforts when it comes to IT, network, and security management. MSPs are increasingly looking to see how AI can help them "do more with less."

SAMI is an AI-powered assistant, built into SonicWall Unified Management, that makes IT and network security

management easier than ever. Through a simple chat-based interface, MSPs can use SAMI to streamline repetitive tasks, gain actionable insights, and apply the latest best practices. Whether you're a seasoned cybersecurity pro or just getting started, SAMI uplevels every administrator to work faster, smarter, and more effectively to manage their customers' digital environments.

Unlock Maximum Productivity, Achieve More

Reduce Complexity

Work smarter with actionable insights synthesized from comprehensive data analysis. Regardless of the level of technical expertise, administrators can make better informed decisions.

Empower Every Level of Administrators

Instead of digging through documentation and/or opening a support ticket, administrators can interact with SAMI through simple conversational language and get immediate answers. Empower your administrators to feel more confident at every level to execute IT and network management operations and maximize their productivity.

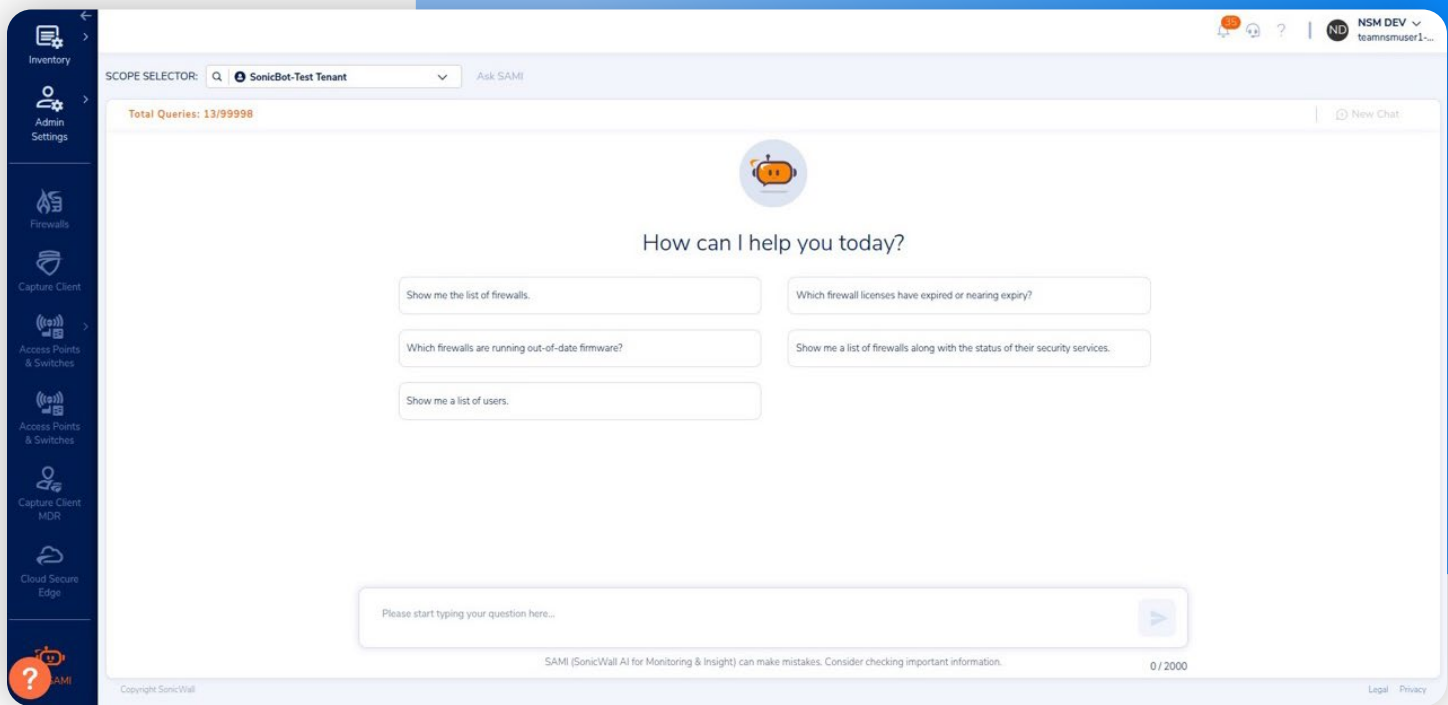

Fewer Manual Tasks, Faster Workflows

Streamline repetitive tasks and create faster workflows that frees up time for other tasks that deliver value to your customers.

Increase Security

Optimize your security tools with accessible best practice guidance that can be immediately implemented. This ensures that administrators follow industry-standard procedures to secure networks effectively.

Key features

Analytics

Analyzes data related to firewall inventory, status, configuration, topology, and traffic. Fetches insights into client devices, threats, and application vulnerabilities so administrators can make informed decisions based on comprehensive data analysis.

Streamlined day-to-day operations

SAMI can streamline repetitive tasks and enable faster workflows. This not only saves time but reduces the possibility of human error.

Best practices guidance

Leverages SonicWall documentation to provide best practices using conversational language. This guidance covers various aspects of network security management, ensuring that administrators follow industry-standard procedures to secure the networks effectively.
