PROTECTION SERVICE
FOR BUSINESS

Secure Business Computing Managed by Experts

IT security challenges of SMBs

Modern business depends heavily on computers and mobile devices. At the same time, criminals are constantly creating new ways to use the Internet for their illegal activities. In spite of these facts, many small and medium sized businesses (SMBs) still lack a modern security solution that covers all layers in the organization and ensures that software vulnerabilities are fixed when updates are available.

Service instead of technology or software

By choosing security as a service, you can concentrate on your business without having to worry about IT security, security settings or software updates. F-Secure Protection Service for Business (PSB) protects all your devices against the latest security threats. F-Secure maintain the whole solution and your local IT security partner monitors and manages your computers and mobile devices. No hardware investments are required, which means direct cost savings to you.

Benefits

Experts handle your security needs effectively, which allows you to focus on your own business

Your desktop PCs, laptops, mobile phones, file servers and Microsoft Exchange servers are protected without any additional hardware investments

Complete protection for your PC: virus and spyware protection, spam control, intrusion prevention, application control, firewall and browsing protection with unique Exploit Shield

Operating system and third-party application updates complement the antivirus protection

F-Secure DeepGuard™ and F-Secure Blacklight™ protect against the latest threats and hidden malware (rootkits), which are not detected by traditional antivirus solutions

Uncompromised security with unified management

Always up-to-date protection thanks to automatic security updates and software upgrades

F-Secure Protection Service for Business

The solution protects computers (PCs, laptops, Macs), file servers (Windows and Linux), e-mail servers (Microsoft Exchange) and mobile devices (phones and tablets). Automated features like virus definition updates and software upgrades for F-Secure clients ensure always up-to-date protection. The solution consists of four different products.

PSB Workstation Security

No matter if you are using Windows PCs, Macs or a hybrid environment, with PSB Workstation Security you can protect all your computers with one subscription. Windows protection safeguards your company against all malware. Mac protection is an antivirus only solution with ability to control the system firewall. PSB Software Updater proactively scans computers for missing operating system and third-party application patches and makes it easy to keep them up-to-date.

PSB Server Security

Effective protection for Windows and Linux servers. Real-time and scheduled scanning ensures that no malware are stored on your file servers. Windows version includes antivirus, behavior analysis and cloud-based reputation technology (DeepGuard).

PSB E-mail and Server Security

Complete protection for servers running Microsoft Exchange. The product contains three modules and is licensed per usage. It includes enhanced cloud-based protection with DeepGuard, Browsing Protection for terminal users and centralized quarantine management. E-mail and Server Security supports Windows, Microsoft Small Business Server, Microsoft Exchange, Terminal and Citrix servers.

PSB Mobile Security

The product is available for Android, Symbian, Blackberry and Windows Mobile platforms. Mobile Security contains antivirus, antispyware, firewall, antitheft and browsing protection, with some differences between operating systems.

Software Updater, New feature in Protection Service for Business (PSB workstation/Portal)

PSB Software Updater ensures that operating systems and third-party applications that are used in your organization are up-to-date. It provides visibility of the latest real-time security status and lowers risks associated with unpatched software. It can proactively scan computers for missing operating system and third-party application patches, which can be deployed either manually or automatically, or you can schedule the deployment.

Manage security yourself – Protection Service for Business, Standard

If you prefer to manage IT security yourself, choose Protection Service for Business Standard and its easy-to-use web-based management portal. Technically the solution is the same; the only difference pertains to who has access to the management portal. The management portal is accessible from anywhere, at any time. The security status of office workers as well as people working remotely can be monitored at all times. PSB Standard is easy to install and deploy without any configuration. It has seven predefined security profiles for different end-customer purposes.

Award-winning technology
Best Protection 2011, AV-TEST

F-Secure Client Security

F-Secure Protection Service for Business is based on the same excellent technology as F-Secure Client Security
